Dear Ms. Rathbone,

It has come to our attention that as cattle permittees we may lose access to use of discharge water from the Wesco Oil Company in Sheldon Dome Field NW, Permit #WY-0025607. We may also lose discharge water from Eagle Oil and Gas Company, Permit #WY-0020338, and lose discharge water from Phoenix Production Company, Permit #WY-0024953. To lose this water though it is unsightly and appears unclean would be a detriment to our Range resource. Large and small animals at various levels benefit and stand to be on the losing end if the discharge water is lost. These drainages are established with riparian zones that influence the surrounding ecosystem. If the water is lost erosion, sedimentation, gully washes, and downsizing/downcutting will occur if these now naturalized riparian zones are allowed to go away.

The economic impacts to myself and other livestock operators will force us to either downsize our livestock operation or force us out of the livestock business altogether. Please do not take the only accessible water that we have in this portion of our Range.
